ANDA Present Ltd. offer the possibility to import our products data automatically from our system to our distributors who own webshop and would like to list the products with detailed information, prices and printing information.

We offer xml files and csv files also. Csv files are only available for product and price feed. Please noted that **for csv we generate a different ID and url!**

We generate the files individually and it contains your own discount prices and the product info contains the languages that are available on your portal where you can login.

Frequency of updating

The provided xml files are updated regularly so the links that you got always contain the updated product, price, stock and printing information.

XML feed name	XML feed description	File size	Update frequency	Updated file is ready at
Product xml / csv	Product information feed	30-40 MB	3 times a week	Odd days 9:00 AM
Category xml	Product categories feed	20-30 kB	Twice a day	(7:30 AM, 21:30 PM)
Inventory xml	Product stock information feed	4-5 MB	Every 30 min	(X:00, X:30)
Price xml / csv	Product price feed	3-5 MB	Once a week	Saturday 10:00 PM
Labeling xml	Labeling information feed	20-25 MB	3 times a week	Even days 4:00 AM
Labeling csv	Labeling information feed	3-5 MB	Once a week	Saturday 7:00 AM
Labeling price xml	Labeling pricing feed	200-300 kB	Once a week	Saturday 9:00 AM
Unique product price xml	Unique product price feed	100 kB	Once a week	Saturday 9:00 AM
Printing time info csv	Printing time information	5-10 kB	Every 10 min	X:00, X:10, X:20, X:30, X:40, X:50

ANDA PRESENT GROUP

Available languages

For the following xml feed we provide them in all languages available on our webshop:

- Product
- Category
- Labeling info
- Printing time info

Language codes (19):

- en
- hu
- de
- it
- fr
- nl
- cz
- pl
- ro
- sk
- no
- se
- dk
- fi
- gr
- si
- bg
- es
- pt

At the first step we have to activate your XML feed access and we need one or more static IP addresses from where you would like to reach the xml files. **For activation, please contact your sales representative.**

The product XML and CSV feed available on languages regarding the web portal where you have web account.

The product **xml feed** can be accessed on the following link:

https://xml.andapresent.com/export/products/language_code/unique_xml_ID

The product xml contains only the available products and the detailed information about them.

The product **csv feed** can be accessed on the following link:

https://xml.andapresent.com/export/products-csv/language_code/unique_csv_ID

Update frequency

3 times a week

Test reports

Test report	<test_report>	(string)
-------------	---------------	----------

Most data contain text or number. Below you find the special cases:

- Item number:
 - AP12345-01: -XX is the colour code (see Appendix)
 - AP12345-01-02: -XX-XX means there are two colours of the product (see Appendix)
 - AP12345-01T: the colour of the product is transparent
 - AP12345_L, AP12345_16GB: _X is the size code

ANDA PRESENT GROUP

- AP12345-01_L: colour and size code order (colour comes first and then the size)
- AP12345-A: the product with form (like cow, possible values: A, B, C, D, ...)
- temporaryUnavailable:
 - 1: the product is not available
 - 0: the product is available
- customProduct:
 - 1: the product is a custom made product
 - 0: the product is not a custom made product
- MOQ:
 - 0: there is no minimum order quantity
- Geographical restrictions:
 - Contains the list of the country codes where the product can not be sold

(boolean/integer)*= the field is boolean type but the value (0 or 1) is coming in integer format.

Material:

- We use 5 field for material because one product could be made from different materials. We use as much field as much material the product contains. Example a bottle is made from glass and plastic the Material 1 field contains the glass and the Material 2 field contains the plastic. The Material 3-5 field is not listed in the xml file.

Assembled product:

- Some products are assembled from different subparts, like Creacup or Creaslip. In this case you will find the parts by the following logic:
 - Assembled product: AP892006
 - Subpart: AP892006-06_B (-06 – colour code, _B – part code)
 - Assembled product with size: AP809497
 - Subpart: AP809497-01_36-38-A (-01 – colour code, _36-38 – size code, -A – part code)
- In case of subpart you will find an assembly product value with “1”
 - For this part you find the Root item number and could combine the parts

In the prices XML and CSV feed you can find the catalogue price and the distributor purchasing prices that contain the discount you get.

The product **xml feed** can be accessed on the following link:

https://xml.andapresent.com/export/prices/unique_xml_ID

The product **csv feed** can be accessed on the following link:

https://xml.andapresent.com/export/prices-csv/unique_csv_ID

The prices file contains only the available products and the prices of them. The products with custom prices are not in the feed.

The product price xml's currency is matching your webshop account currency.

Update frequency

Once a week

Information in the feed

Item number	<itemNumber>	(string)
Currency	<currency>	(string)
Price	<amount>	(integer)
Type of price	<type>	(string)

Most data contain text or number. Below you find the special cases:

- Currency: 3 digit price code
- Type:
 - o listPrice (catalogue price)
 - o discountPrice (distributor purchasing price)

Example

```
<prices>
  <price>
    <itemNumber>AP810803-10_XS</itemNumber>
    <currency>EUR</currency>
    <amount>6.25</amount>
    <type>listPrice</type>
  </price>
  <price>
    <itemNumber>AP810803-10_XS</itemNumber>
    <currency>EUR</currency>
    <amount>2.5</amount>
```

ANDA PRESENT GROUP

```
<type>discountPrice</type>
</price>
<price>
  <itemNumber>AP810103-74</itemNumber>
  <currency>EUR</currency>
  <amount>11.11</amount>
  <type>listPrice</type>
</price>
<price><itemNumber>AP810103-74</itemNumber>
  <currency>EUR</currency>
  <amount>6.666</amount>
  <type>discountPrice</type>
</price>
</prices>
```

In the inventory XML feed you can find the actual stock information of the product. The stock xml feed can be accessed on the following link:

https://xml.andapresent.com/export/inventories/unique_xml_ID

The inventories xml contains only the available products and the stock information of them.

Update frequency

Every 30 minute, so you always get the most updated stock information.

Information in the feed

Item number of product	<itemNumber>	(string)
Type of inventory	<type>	(string)
Stock value of defined inventory type	<amount>	(integer)
More stock than the specified value	<moreThanAmount>	(boolean/string)
Estimated arriving time in central warehouse	<arrivalDate>	(string – Y_M_D)

Special values:

- type:
 - o central_stock: immediately available
 - o incoming_to_central_stock: available within 1-2 days
 - o external_stock: available within 6-8 days
 - o incoming_to_external_stock: incoming to our external warehouse
- moreThanAmount:
 - o 0 – the incoming stock is equal with the value
 - o 1 – the incoming stock is more than the value

Example

```
<inventories>
  <record>
    <itemNumber>AP892006</itemNumber>
    <type>central_stock</type>
    <amount>0</amount>
    <moreThanAmount>0</moreThanAmount>
    <arrivalDate/>
  </record>
  <record>
    <itemNumber>AP811401</itemNumber>
    <type>incoming_to_central_stock</type>
    <amount>74750</amount>
    <moreThanAmount>0</moreThanAmount>
    <arrivalDate>2019-12-09</arrivalDate>
  </record>
</inventories>
```

ANDA PRESENT GROUP

```
</record>
<record>
  <itemNumber>AP741878</itemNumber>
  <type>incoming_to_central_stock</type>
  <amount>20000</amount>
  <moreThanAmount>0</moreThanAmount>
  <arrivalDate>2020-01-10</arrivalDate>
</record>
<record>
  <itemNumber>AP741878</itemNumber>
  <type>incoming_to_central_stock</type>
  <amount>10000</amount>

</record>
</inventories>
```

The printing info XML feed available on languages regarding the web portal where you have web account. The labeling xml feed can be accessed on the following link:

The labeling **xml feed** can be accessed on the following link:

https://xml.andapresent.com/export/labeling/language_code/unique_xml_ID

The labeling **csv feed** can be accessed on the following link:

https://xml.andapresent.com/export/labeling-csv/language_code/unique_csv_ID

The printing info xml contains only the available technologies, positions and the detailed information about them.

Update frequency

For xml feed: Even days 4:00 AM

For csv feed: Every Saturday 7:00 AM

Information in the feed

Item number	<itemNumber>	(string)
Print template pdf is available	<printTemplate>	(string)
Data modification date (date:time)	<lastModifiedDate>	
Available printing positions of the product	<positions>	(string)
Detailed information of position	<position>	(string)
The code of position	<serial>	(string)
Name of position	<posName>	(string)
Image of position if available	<posImage>	(string)
Available technologies of the position	<technologies>	(string)
Detailed information of the technology	<technology>	(string)
The code of technology	<Code>	(string)
The name of technology	<Name>	(string)
Maximum color of technology	<maxColor>	(integer)
Maximum width of technology in mm	<maxWmm>	(integer)
Maximum height of technology in mm	<maxHmm>	(integer)
Maximum diameter of technology in mm	<maxDmm>	(integer)
The technology is fixed sized.	<fixedSize>	(boolean/int.)

Most data contain text or number. Below you find the special cases:

- printTemplate: link of pdf file if available, empty if not
- posImage: link image file if available, empty if not
- maxColor

ANDA PRESENT GROUP

- fullcolor
- 1-10
- Printing size is determined with max width by max height or with diameter
- fixedSize:
 - 1: the technology is fixed sized
 - 0: the technology is not fixed sized

The printing price XML feed contains distributor prices of our printing technologies. The printing prices xml feed can be accessed at the following link:

https://xml.andapresent.com/export/printingprices/unique_xml_ID

The printing price xml's currency is matching your webshop account currency.

Update frequency

When our printing price list is updated in our system, every day 6:00 PM

Information in the feed

- Currency of the price list <currency> (string)
- Price ranges of printing technologies <prices> (integer)
- Printing technology code <TechnologyCode> (string)
- Printing technology name <TechnologyName> (string)
- Type of indicated unit prices <UnitPriceType> (string)
 - Possible values:
 - price / pc – The unit price refers to the imprint cost of one product at the indicated quantity –and possibly size – range with the indicated number of colours.
 - price / cm2 – The unit price refers to the imprint cost of 1 cm² at the indicated quantity and size range. Accordingly, the imprint cost can be calculated by multiplying this value by the size of the logo.
- Price ranges of indicated technology code <ranges> (integer)
- Number of imprint colours <NumberOfColours> (integer)
 - Possible values:
 - Fullcolour – At full colour technologies the unit price and setup cost are not based on the number of imprint colours.
 - 0-10 – At traditional printing technologies the unit price and setup cost are based on the number of imprint colours.
- Starting value of quantity range <QuantityFrom> (integer)
- Ending value of quantity range <QuantityTo> (integer)
- Starting value of size range <SizeFrom> (integer)
- Ending value of size range <SizeTo> (integer)
 - Size range elements are only used at certain imprint size based printing technologies.
- Imprint unit price at indicated range <UnitPrice> (integer)
- Setup cost at indicated range <SetupCost> (integer)
 - Setup cost refers to the total setup cost with the indicated number of colours.

ANDA PRESENT GROUP

Free printing technologies in the feed:

Our **Free printing** products' selling prices are including imprint costs, such products are associated with FP-** technology codes. Accordingly these technology codes have 0 unit price in our printing price feed, since we only charge setup cost upon ordering these items.

For **UV printing** we generated the range as you can see below:

- UVA1:
 - o From: 0.01
 - o To: 5
- UVA2
 - o From: 5.01
 - o To: 10
-
- UVA+
 - o From: 50.01

So the starting value is the previous range top+0,01 and at the first range the starting value is 0,01.

At the **VS technology** we use a special calculation that use the price of the range and the sticker application. Under VS there are two subtechnologies:

- VS1
- VS+

At **BR technology** we do a unique calculation every time so that's why it is empty.

Example

```
<priceList>
  <currency>EUR</currency>
  <prices>
    <price>
      <TechnologyCode>RE2</TechnologyCode>
      <TechnologyName>Rainbow Engraving</TechnologyName>
      <UnitPriceType>price / pc</UnitPriceType>
      <ranges>
        <range>
          <NumberOfColours>6</NumberOfColours>
          <QuantityFrom>1</QuantityFrom>
          <QuantityTo>49</QuantityTo>
          <UnitPrice>1.04</UnitPrice>
          <SetupCost>15</SetupCost>
        </range>
        <range>
          <NumberOfColours>6</NumberOfColours>
```

ANDA PRESENT GROUP

Printing price calculation methods

The cost of printing should be calculated according to technologies and within them in ranges, depending on the quantity / color number / print size.

We have some printing technologies where pricing is area based.

- Digital transfer printing (DTA/DTB/DTC/DTD codes)
- Transfer printing (TA/TB/TC/TD codes)
- UV printing (UVA/UVB/UVC/UVD codes)
- Rotary UV printing (RUV code)
- Inkjet overprinting (OP)

In case of these technologies one of the above listed codes is assigned to the product in our printing information feed, along the maximum possible imprint size. But given the area based nature of the pricing, the imprint price can be only determined in combination with the requested imprint size, since the distributors may request a smaller logo, than the maximum indicated size.

For example the product has DTB printing code. If the requested print size is within 50cm², then DTB1 price needs to be applied, over 50cm² but not more than 150 cm² DTB2 price applies.

But these area-based conditions are displayed in our printing price feed by the SizeFrom and SizeTo entries.

In case of printing price calculation the base is the labeling feed where you get the following info about the product:

- position
- available technology
- max printing size (width/height)

▼ labeling	Element	(3 Items)
▼ itemNumber	Element	"AP809363-01"
#text	Text	AP809363 01
printTemplate	Element	
▼ positions	Element	(4 Items)
▼ position	Element	(4 Items)
> serial	Element	"1"
> posName	Element	"Barrel - right handed"
> posImage	Element	"https://xml.andapresent.c"
▼ technologies	Element	(3 Items)
> technology	Element	(7 Items)
> technology	Element	(7 Items)
▼ technology	Element	(7 Items)
> Code	Element	"UVA"
> Name	Element	"UV LED printing"
> maxColor	Element	"Full Color"
> maxWmm	Element	"60"
> maxHmm	Element	"6"
maxDmm	Element	
> fixedSize	Element	"0"

ANDA PRESENT GROUP

With the size of the max printing it is possible to calculate the maximum are of the printing (60 mm x 6 mm = 3,6 cm2).

In the printing price feed you can search for the UVA technology where the price and the CODE is defined by size:

▼ price	Element	(4 Items)
▼ TechnologyCode	Element	"UVA1"
#text	Text	UVA1
> TechnologyName	Element	"UV LED printing"
> UnitPriceType	Element	"price / pc"
▼ ranges	Element	(11 Items)
▼ range	Element	(7 Items)
> NumberOfColour	Element	"fullcolour"
> QuantityFrom	Element	"1"
> QuantityTo	Element	"9"
> SizeFrom	Element	"0.01"
> SizeTo	Element	"5"
> UnitPrice	Element	"0.36"
> SetupCost	Element	"29"
> range	Element	(7 Items)

The size defines that you have to use UVA1 code.

The UVA2 code is for bigger printing size:

▼ price	Element	(4 Items)
▼ TechnologyCode	Element	"UVA2"
#text	Text	UVA2
> TechnologyName	Element	"UV LED printing"
▼ UnitPriceType	Element	"price / pc"
#text	Text	price / pc
▼ ranges	Element	(11 Items)
▼ range	Element	(7 Items)
> NumberOfColour	Element	"fullcolour"
> QuantityFrom	Element	"1"
> QuantityTo	Element	"9"
> SizeFrom	Element	"5.01"
> SizeTo	Element	"10"
> UnitPrice	Element	"0.4"
> SetupCost	Element	"29"
> range	Element	(7 Items)

ANDA PRESENT GROUP

Basic information about logo procedures

- Types of pricing
 - o Quantity based (Price/pc)
 - o Area based (Price/cm²)
- Above that the price depend on
 - o Quantity (ranges)
 - o Number of colours
- For colors we use
 - o Fullcolour
 - o 0-10
- Setup cost
 - o There is a charge for each logo, color number dependent cost, but not for full-color technologies.

Information according to the printing technologies

Pad printing (P0, P1, P2)

- Quantity based, colour number dependent pricing

Transfer printing (T0, T1, T2)

- Quantity based, colour number dependent pricing

Screen printing (S0, S1, S2)

- Quantity based, colour number dependent pricing

Ceramic printing (C1, C2, C3)

- Quantity based, colour number dependent pricing

Cylindrical screen printing (RS)

- Quantity based, colour number dependent pricing

Engraving (E0, E1, E2, E3)

- Quantity based pricing

Rainbow engraving (RE1, RE2)

- Quantity based pricing

UV-LED technology (UVA-D 1-5-+,)

- Quantity and area based pricing
- As a first step, the area of the printed logo (circle or rectangle) must be determined and multiplied by the price corresponding to the size of the area obtained (cm²).
- The size of the area determines the price group (UV1-5) and within that the price by number of quantities must be applied
- Above a certain size, the UV + price group can only be used, in which case the unit price is given per cm², no pricing by quantity
- To be easy to use the xml feed we've created area ranges in the xml feed, and these ranges come with a price per piece, calculated from the top size:

ANDA PRESENT GROUP

- UVA1:
 - From: 0.01
 - To: 5
- UVA2
 - From: 5.01
 - To: 10
-
- UVA+
 - From: 50.01

Doming (DO1, DO2, DO3, DO4, DO5)

- Quantity based pricing
- The pricing of the technology is based on quantity. However, our products with epoxy sticker are always classified in the DO* printing price group corresponding to the size of the sticker

Sublimation (SU1, SU2, SU3)

- Quantity based pricing
- The pricing of the technology is based on quantity. However, our products with sublimation printing are always classified in the SU* printing price group according to the applicable print size.

Digital printing (DG1, DG2, DG3)

- Quantity based pricing

Digital transfer (DTA-T 1-5)

- Quantity and area based pricing
- As a first step, the area of the printed logo (circle or rectangle) must be determined and multiplied by the price corresponding to the size of the area obtained (cm²).
- The size of the area determines the price group (DT1-5) and within that the price by number of quantity must be applied

Vinyl sticker (VS1, VS+)

- Quantity and area based pricing
- As a first step, the area of the printed logo (circle or rectangle) must be determined and multiplied by the price corresponding to the size of the area obtained (cm²).
- The size of the area determines the price group (VS1, VS+) and within that the price by number of quantity must be applied
- Above a certain size, the VS+ price group can only be used, in which case the unit price is given per cm², no pricing by quantity
- VS1 is fixed quantity price for stickers under 20cm², the VS+ is area based pricing for sticker over 20cm²
- There is a separate price per piece for gluing

Vision film printing (VF)

- Quantity based pricing

ANDA PRESENT GROUP

White printing (WPC1-3)

- Quantity based pricing

Embossing (O1)

- Quantity based pricing

Embroidery (BR)

- An individual calculation is required in each case, so there is no price loaded into the system for this

Hat band sewing (HS)

- Accessory, quantity based pricing
- Connected technologies (DT, SU)

Free printing technology (FP-XX)

- in case of products with FP-xx technology, where the product has a price that contains the price of printing cost. Above this only the printing fee indicated for FP-XX technology has to pay

There can be 2 different error during the access of the xml and csv feeds.

1. Access denied

In this case the IP address that was setup during the access is not valid. The xml feed is requested from a non-listed IP address. In this case, please check the IP address and forward it to your sales representative.

2. Not found

In this case the xml or csv feed is not ready yet. In some cases, a few hours or days is necessary for the generation of the files. Please read the timing part of this manual.

1. My feeds were activated, but the link cannot be accessed.

Once your feeds are activated it takes time still the file is generated, and all the feed have to be available in 24h. It is necessary to set up your IP on a whitelist, so a static IP address is also a need.

2. Why are some value in the XML different than on the portal page?

It is possible that we made some changes and your feed is still not updated. It is also important to schedule your update services to our updated frequency.

3. The XML file downloading is slow.

Some of the xml files are a too large file so be aware of the file size when you setup your system and services. Take note of the estimated file size on Page 2.

4. My webshop doesn't recognize the fields in the XML feed

Your shop might use different names for the fields than the xml feeds. The modern e-commerce motors have an option to 'map' the field names from the feed to the internal field names. In this case please contact with the customer support of the e-commerce site

5. Can I convert a XML to a CSV or XLS file?

Yes, you can in Excel after opening the xml file and use Save as... function. But we also provide some feeds in csv format too.

6. Why should I use XML file instead of an Excel file?

An excel file that generated from our xml feeds are static file; once it has been created the content is frozen. If we add or change product(prices) the excel becomes outdated. XML feed files are linked to live feed; if we add or change any information it will be visible in the XML regarding the updating frequency.

7. How to check my IP?

There are several options to check your IP. Please be aware that we need a static IP! You can check your IP:

- <http://ip.lfs.hu>

It happens that someone does not enter a specific IP address, but a range or several IP addresses. In this case, it is worth converting with the following tool:

ANDA PRESENT GROUP

- <https://www.ipaddressguide.com/cidr>

and use the calculating IP address.

8. Does the xml feed include the on sale prices?

Yes.

9. How often do the xml feeds updated?

Check the refresh information on the first section of this document.

10. Does unique XML ID change if we add another IP address to the xml feed list?

No, it doesn't. Once a unique xml id is created it never changes.

11. Can we have more than 1 IP address for XML feed links?

Absolutely. They can provide us as many IP addresses as they want, even IP range. This process is executed in xml feed request ticket(s). They can list multiple IP addresses in 1 ticket or create new ticket later if they feel the need to add 1 more IP address later to the system.

12. Does inactive products appear in the xml feed? If so, are they marked as inactive?

Only active products appear in the xml feed.

Contact Us

In case of any question or problem please feel free to contact your sales representative.
