

STRICKER

webservice v2.20

What is STRICKER Webservices?

What is Stricker Webservices?

Webservice is a technology resource, used to transfer data between platforms.

This transfer is made with information only and takes place through protocols independent of the programming language. Webservices work with any operating system, hardware platform or Web support programming language. Through this resource, Stricker Europe makes all the data available for the use of customers in the building of their own E-businesses in the most diverse levels of complexity.

To access, Stricker will provide you with an access key.

This key is personal and non-transferable, and its use must be respected in accordance with the terms and conditions of use.

This access key must be replaced in all fields identified as **Access_Key**.

The information is sorted by languages and currencies.

Always remember to choose the language before using the Webservice.

It is possible to access Stricker's information through direct download, where you will have access to the same data in formats:

.XML / .CSV / JSON

Levels of information

Stricker Europe data is divided into 3 levels:

- Products
- Customization
- Stocks

Products:

All product information on the official Stricker Europe website is shared via the Webservices.

For each product in the portfolio, there is information on:

Reference ID, name, description, color, size, capacity, category, catalog, brand, material, components, individual prices for each product.

93716 ← **ID REFERENCE**

DUMAS, A5 Notepad ← **SHORT DESCRIPTION**

PRODUCT COMPOSITION: Notepad supplied in non-woven pouch. Ballpen supplied
MATERIAL WEIGHT: 70 g/m²
COUNTRY OF ORIGIN: China

Customization

Stricker provides the personalization of data techniques in two ways:

- Combination of product + product price + personalization + personalization price. With this structure, it is possible to **show products combined with their personalization techniques**.
- Only information on personalization techniques, with no changes on the price of the product.

With this structure, it is possible to **show separately the value that represents the product and the value that represents the chosen personalization technique**.

Customization techniques vary, in general: by area and by color. It is necessary to consider the size and color of the personalization to obtain the final value of the chosen technique.

Stocks

It is possible to access the stock data of the various warehouses of Stricker Europe:

- **Stock:** considers the absolute number of products available, regardless of the warehouse.
- **PT Stocks:** Considers only products with stock in warehouses in Portugal.
- **CZ Stocks:** Considers only products with stocks in the Czech Republic warehouses.

Stricker also provides the data for the next entries for products that are expected to be replenished.

This information is identified as '**Next Quantities**'.

Additional topics

Images

All individual images of the products in the Stricker portfolio are available through the Webservices data. You can also find images with the location of the customization available for each product:

- **MainImage:** product image with all colors / components available
- **OptionalImage:** alternative image of the product, for the website.
- **ComponentImage:** image of the various components of the product
- **LocationImage:** location image available for customization
- **AreallImage:** area available for customization with a graphic demarcation of the space (dotted lines).
- **ComposedLocation:** area available for customization for a specific personalization technique with graphic demarcation of the space (dotted lines).

All images are available at:

- High resolution*
- Medium Resolution: 1000x1000
- Low Resolution: 500x500

* Note: High resolution images are only found in the CLOUD resource, available at the link below:

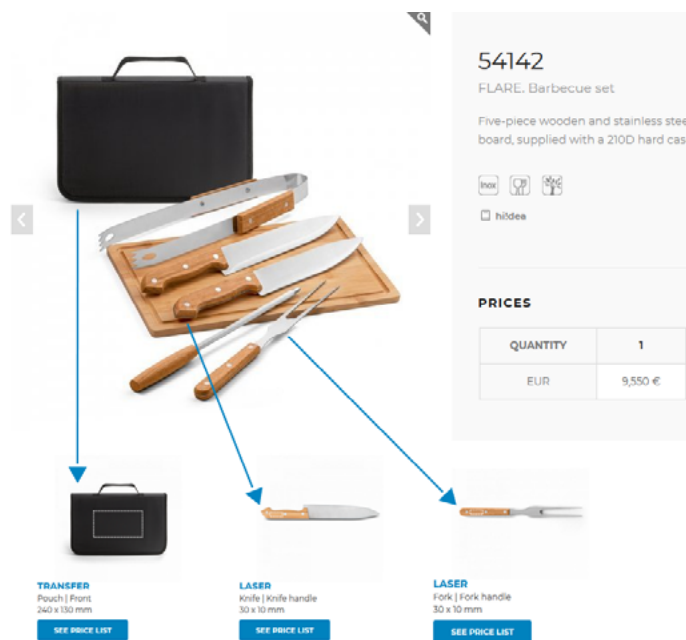

Link: <http://cloud.stricker.pt:8085/index.php/s/7AtUI9DImV7LYeK>

Password: hideacloudfiles

Component & Locations

Each image with printing lines reffears to a combination of Component, Location and Customization Type.

Component exemple:

Location exemple:

Note: some components are not customizable

Same component, with 2 different locations

Prices

The prices provided by Stricker Europe are visible in two ways:

- **Price:** These are the default prices (50% of the physical catalog value) and do not consider commercial conditions that may change the price.
- **YourPrice*:** Prices are already considering the value of the products with the commercial conditions applied.
- **Catalog Price:** same price as physical catalogue. This resource is only available via Webservice, and not in Stricker website

Price of printing option only - CustomizationTable

Price of printing option + product price - CustomizationOptions

* Note: There are specific products where commercial conditions are not applied. Consult your business contact for more information.

Customization tables

The personalization tables are organized according to the characteristics of the chosen technique. They are differentiated by area and / or color.

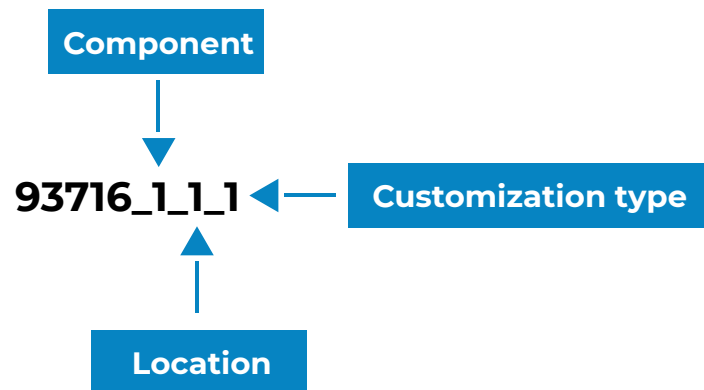

Ex: TRS1-01-02

- **TRS1:** Identifies the technique
- **01:** Identifies the characteristic of the customization area in question (area or size)
- **02:** Identifies the number of colors included in that price list.

The maximum colors for a technique are 10 combinations.

The area is presented in cm², and the size in cm.

Each image with printing lines refers to a combination of Componente, Location and Customization Type.

Note: on Stricker Website there may be data presented in mm / mm². Meanwhile, Webservice is already being converted.

Order

It is possible to communicate an order directly from the customer's website to Stricker without the need to access stricker-europe.com. This feature allows the customer's e-commerce to have direct communication and offers more automation and autonomy to the processes. To implement, see chapter 7 of the manual.

Catalogs

Stricker Europe launches two main catalogs annually: hi!dea and Stockout.

In the Webservice, all products are presented in the same information feed and differentiation is done through specific columns.

- To identify the Stockout catalog, it is necessary to consider products classified as TRUE in the "IsStockout" column.
- Products classified as FALSE are automatically from the hi! dea catalog.

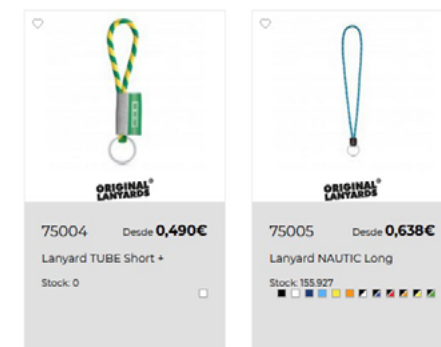

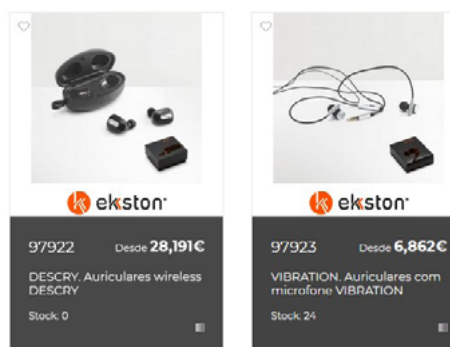

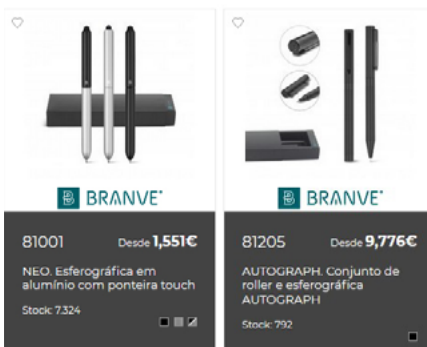

Throughout the year, Stricker launches products exclusively online, which are not in the physical catalog. This information can be found with products marked with TRUE in the "OnlineExclusive" column.

Brands

Stricker Europe has 3 major brands among the catalogs:

- Branve
- Ekston
- Original Lanyards

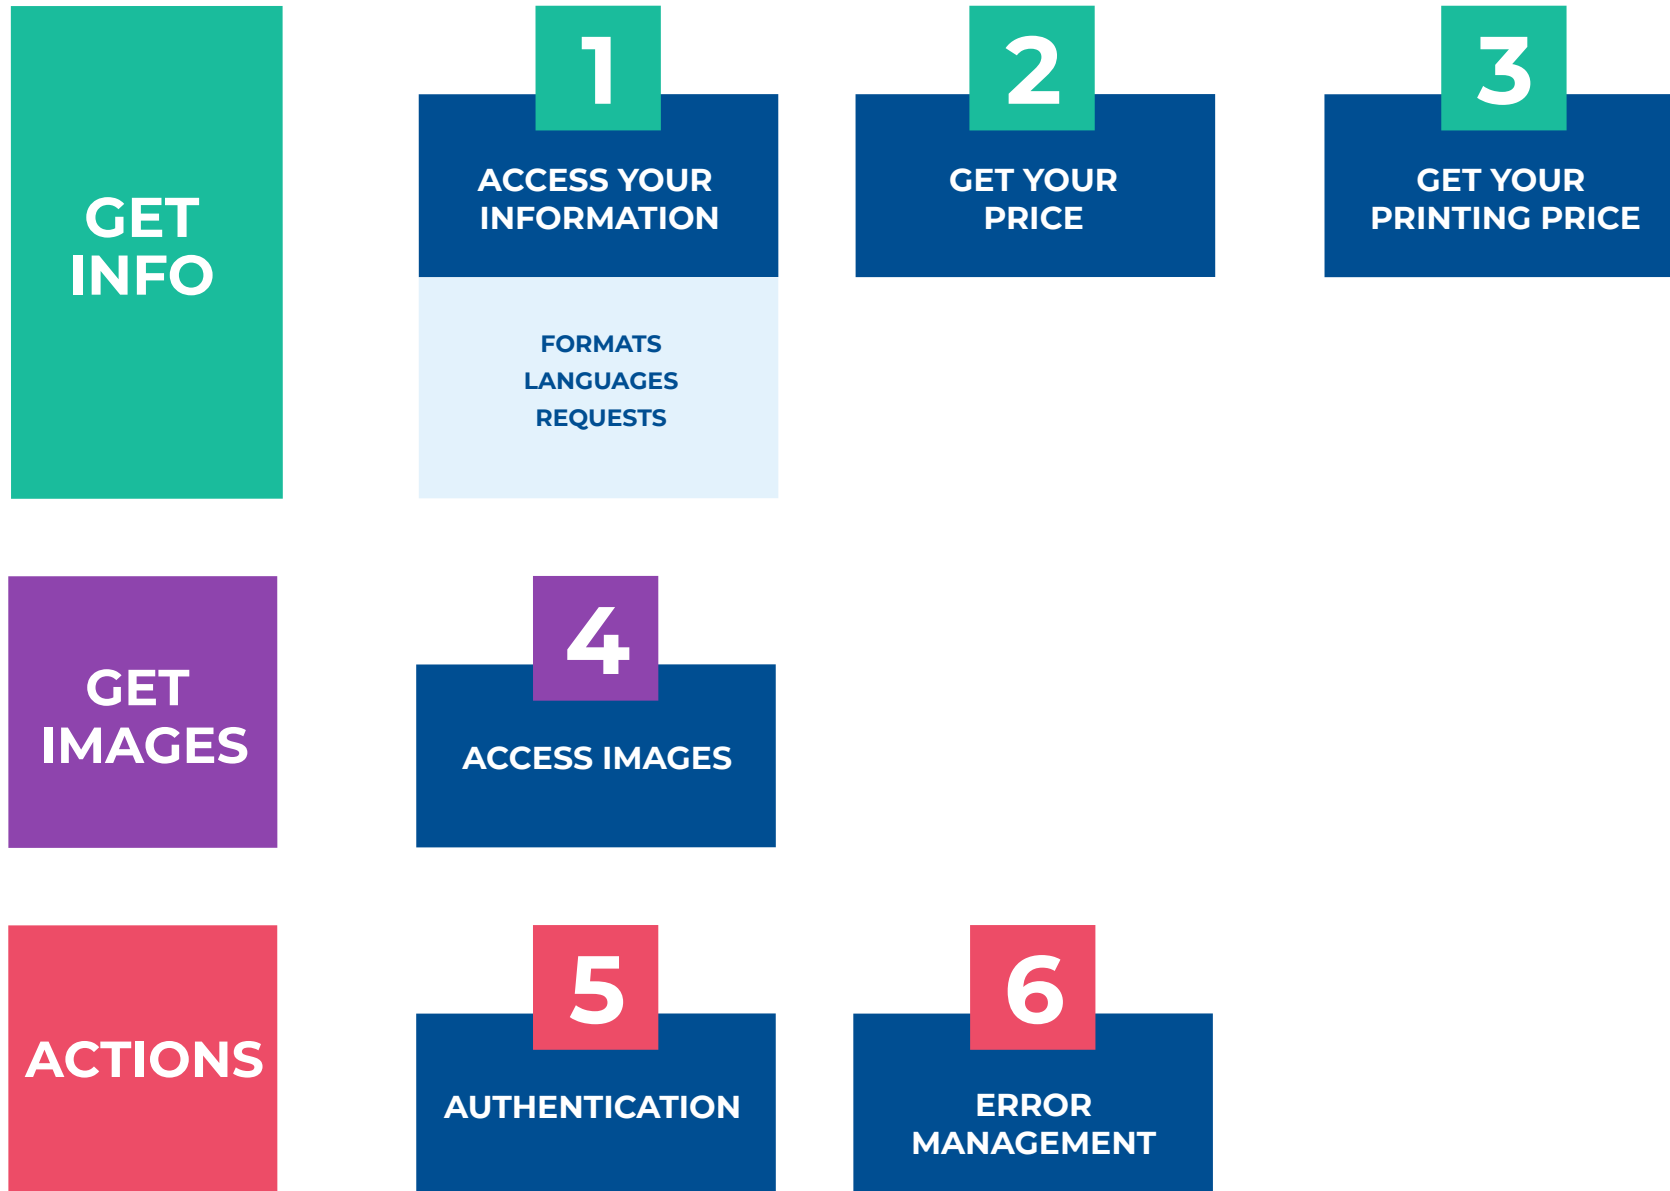

You can find products classified by brands in the “Brand” column.

Request web service access

To request access to Paul Stricker data through Webservice, you should send an email to your sales manager and explain your necessity.

Then you will receive a document provided by Stricker, containing our Privacy Policy and Terms and Conditions to use our data and our webservice. Please, read and confirm the agreement. Your password will be generated and delivered just after the agreement done.

You will receive the password and the manual / documentation to implement the Webservice.

** Please note: in case of lost password, inform immediately your sales manager to provide you a new one. The lost password will be inactivated and replaced by the new one. Remind to change it in all necessary connections.

Norwegian	NO
Romanian	RO
Serbian	RS
Swedish	SE
Ukrainian	UA

1.1 SOAP (part 1)

When accessing the web service using SOAP protocol the data format is always xml. It can be necessary to raise the timeout period because of the size of the transmitted information.

Service	Address
Service address	http://ws.stricker-europe.com/strickerservice.svc
Service WSDL address	http://ws.stricker-europe.com/strickerservice.svc?WSDL
Single WSDL	http://ws.stricker-europe.com/strickerservice.svc?SINGLEWSDL

1.1 SOAP (part 2)

Methods

- 4.1. AuthenticateClient** – Used to authenticate client (session token).
- 4.2. ValidateSession** – Used to check if previously established session is still active.
- 4.3. ProductsTree** – List of full product tree (reference, SKUs, prices, customization options...).
- 4.4. Products** – List of product properties by main reference (reference, name, description).
- 4.5. Optionals** – List of product optionals properties (SKU, reference, color, size, capacity, price).
- 4.6. OptionalsComplete** – List of product optionals properties combined with product properties (reference, SKU, name, description, color, size, capacity, price).
- 4.7. CustomizationOptions** – List of product customization possibilities (reference, component, location, area, customization type, price).
- 4.8. CustomizationTables** – List the customization tables/techniques prices.
- 4.9. Stocks** – List of product stock and future stock entries (SKU, stock).
- 4.10. Colors** - List of color codes and names.
- 4.11. OptionalsPrice** – List with options for each product
- 4.12. ProductTypes** – List of product types (description, sub-types)
- 4.13. OrderList** – List of orders
- 4.14. CountryStocks** – List of product stock and future stock entries by country (PT or CZ)
- 4.15. CloseSession** – Close session.
- 4.16. CatalogPrices** – List with catalog prices for each product

1.2 REST (part 1)

When accessing the web service using REST protocol, the response data format will be JSON by default. The desired format can be selected by changing the request header according to following table:

Data type	Header	Value
XML	Accept	application/json
JSON	Accept	application/xml

Web service resource parameter

Parameter name	
your_accesskey	Please refer to section 2.
session_token	Please refer to section 6.
language	Please refer to section 1.

Product xml and json example

XML	JSON
<pre> <Products> <Product> <ProdReference>30101</ProdReference> <Name>LUANDA Men's t-shirt</Name> <Description>Men's t-shirt. 5 AUTHENTICATION (part 1)

To access services client must be authenticated in the system, this is possible using the provided web service access key. Client must request authorization. If client is allowed, a session token will be generated, otherwise there will be an error message. All requests except authentication require the session token as a parameter.

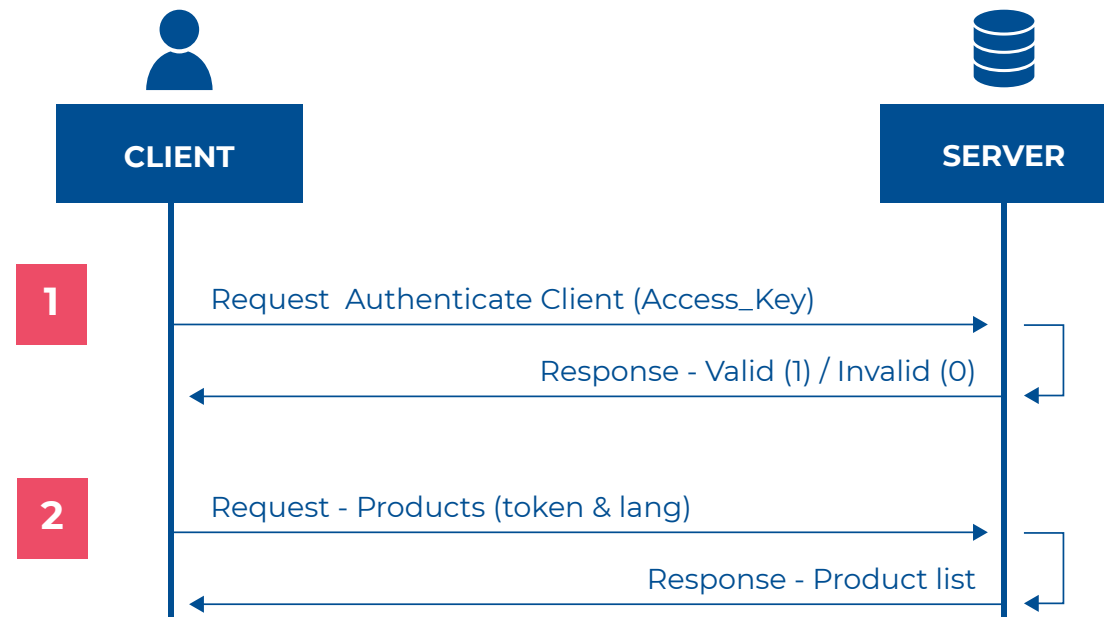

Authentication scenario 1 (no previous session token stored, or session token invalid)

1. Request "**AuthenticateClient**" with access key, if allowed, response session token.
2. Request "**Products**" with session token and language as parameter.
Store session token in a variable, the session token can be valid up to 24 hours.

5 AUTHENTICATION (part 2)

Authentication scenario 2 (already authenticated, session token stored)

1. Request "**ValidateSession**" with the previous stored session token, if the token is invalid, go back to "**Authenticate scenario 1**", if token is valid, there is no need to authenticate again.
2. Request "**Products**" with token and language as parameter.

6 ERROR MANAGEMENT

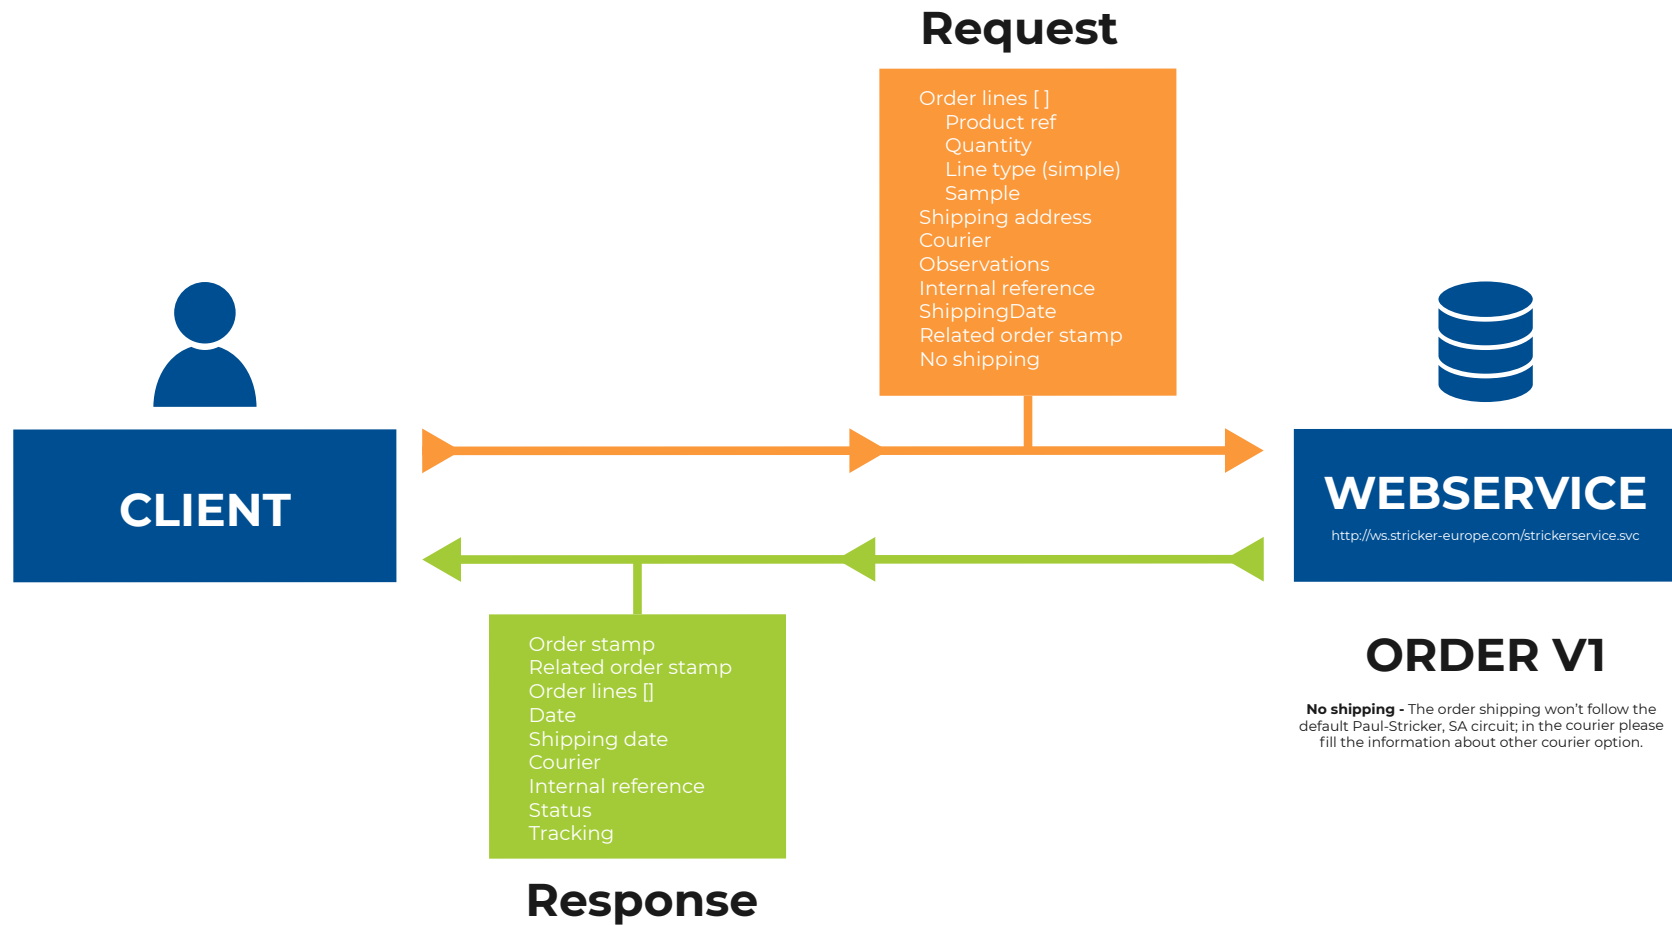

All response data structures have the following properties with information regarding the request status, this information is empty, unless there was an error with the request.

Property name	Type
ErrorCode	bool
ErrorMessage	string

In the following table you will find the list of custom error codes and its meaning:

Code	Meaning
1	Forbidden (the access key is invalid)
w2	There was a problem with your request (internal error occurred. This situation will be reported to our developers and they will fix as soon as possible. Please try again later.)
10	Access key required (missing access key in the request)
12	Session token required (missing session token in the request)
13	Invalid session (session expired)
14	Maximum request per day reached
15	There is a problem with your account. Please contact your sales manager
70	Invalid order (duplicate internalReferer)

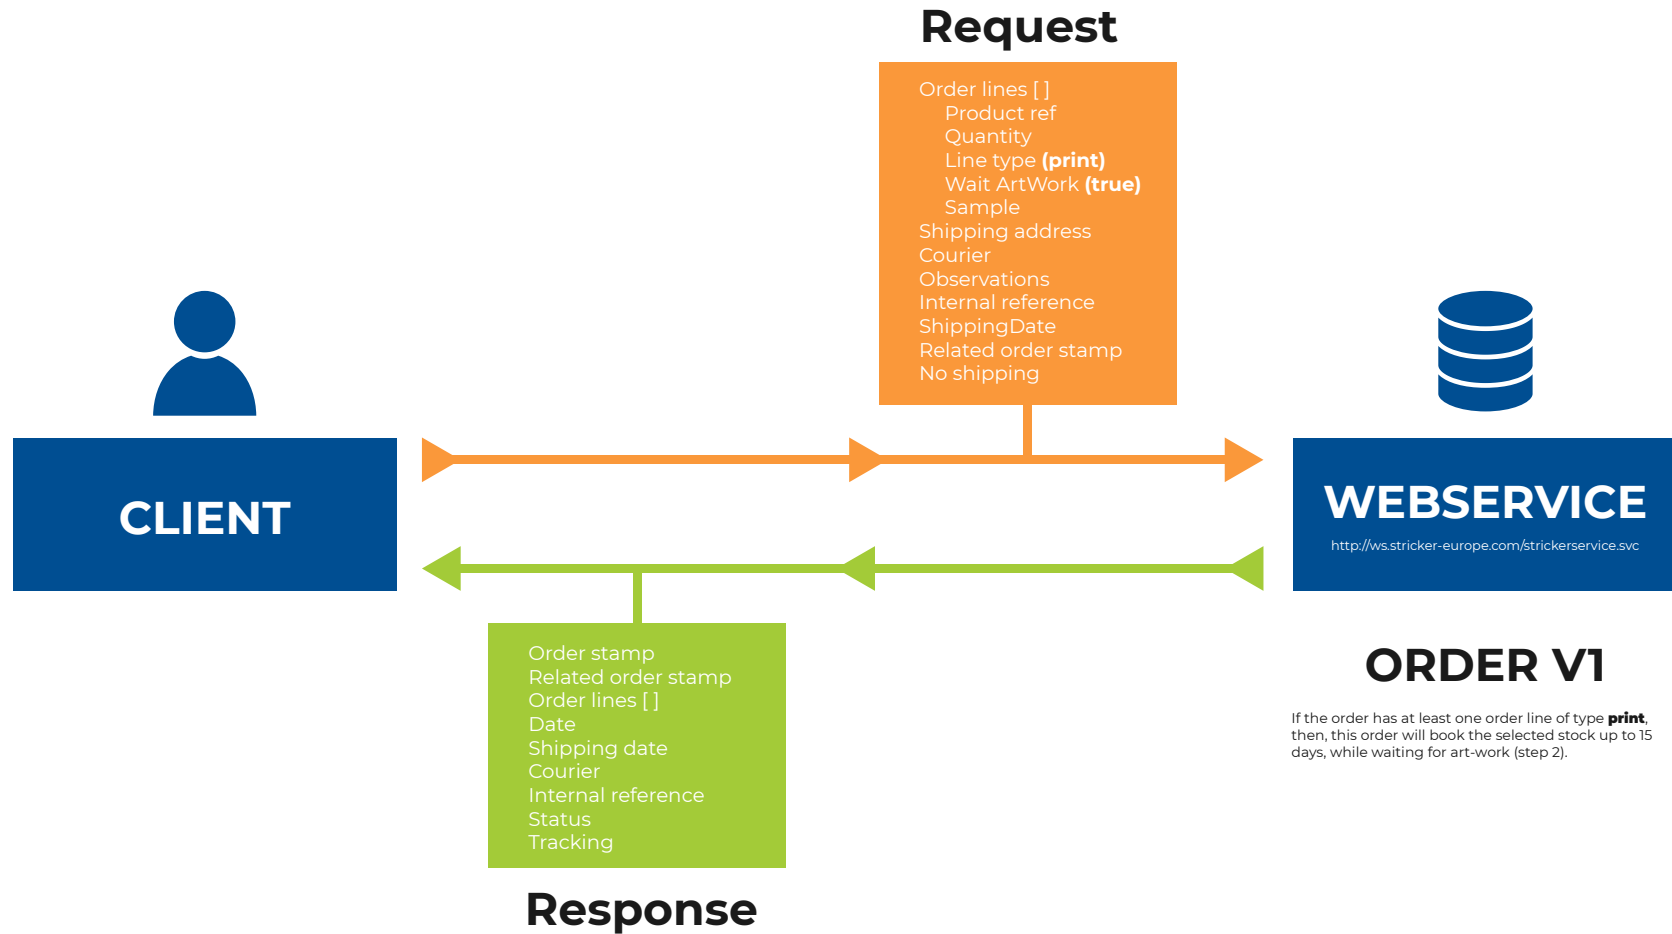

7 PRODUCT ORDER

Always keep your **Order stamp** during all the process

8 PRODUCT ORDER WITH PRINT

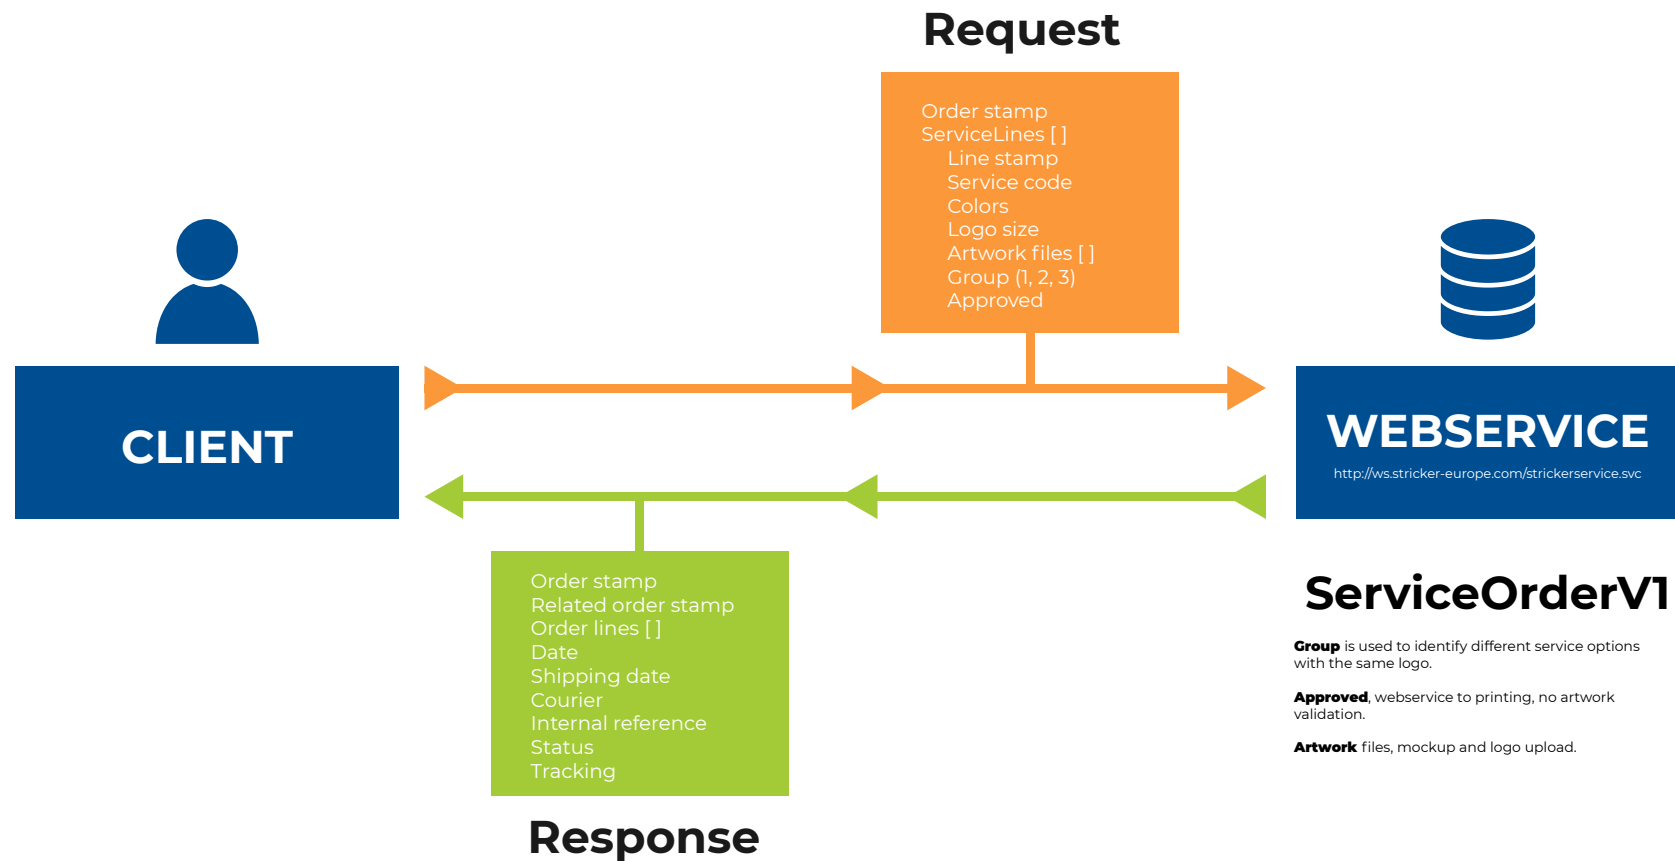

Printing & artwork information

Always keep your **Order stamp** & **orderlinestamp** during all the process

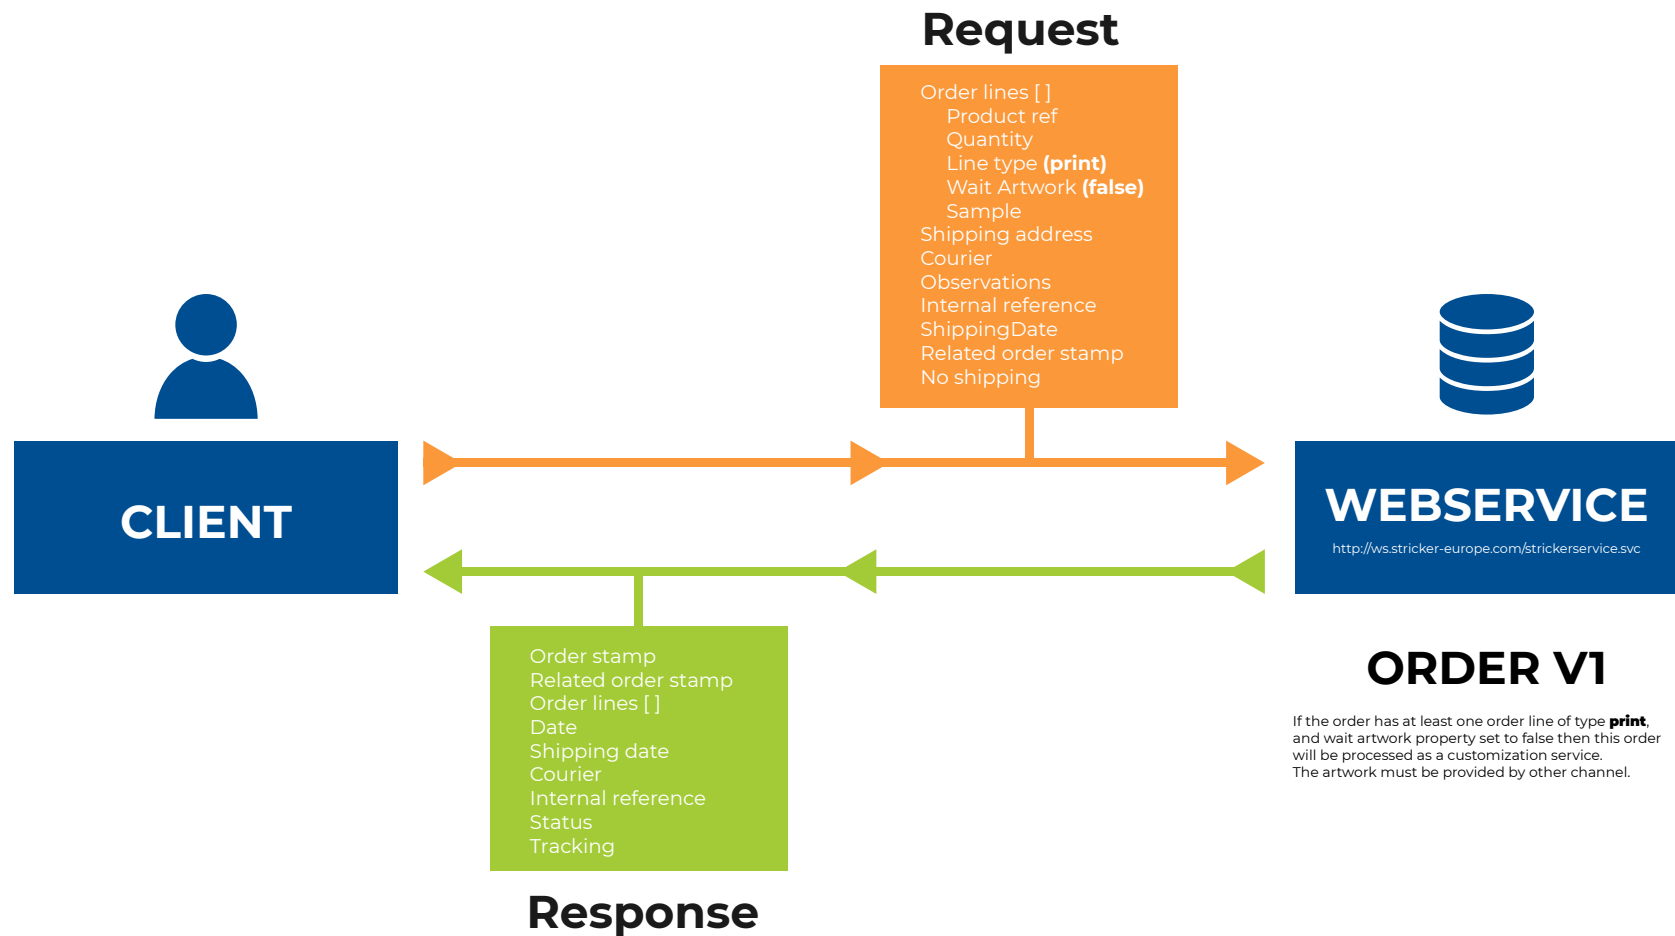

8 PRODUCT ORDER WITH PRINT

Printing & artwork information

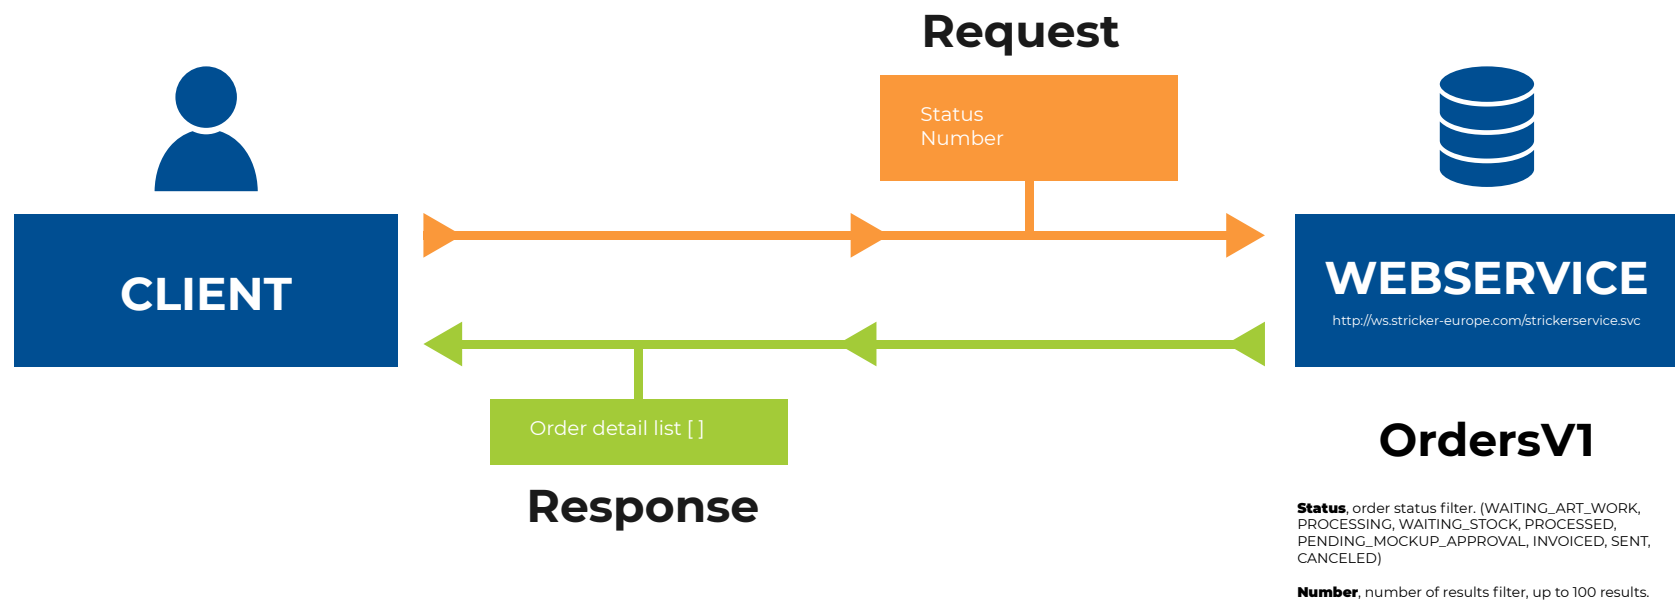

Always keep your **Order stamp** during all the process

9 PRODUCT ORDER WITH PRINT (ARTWORK LATER)

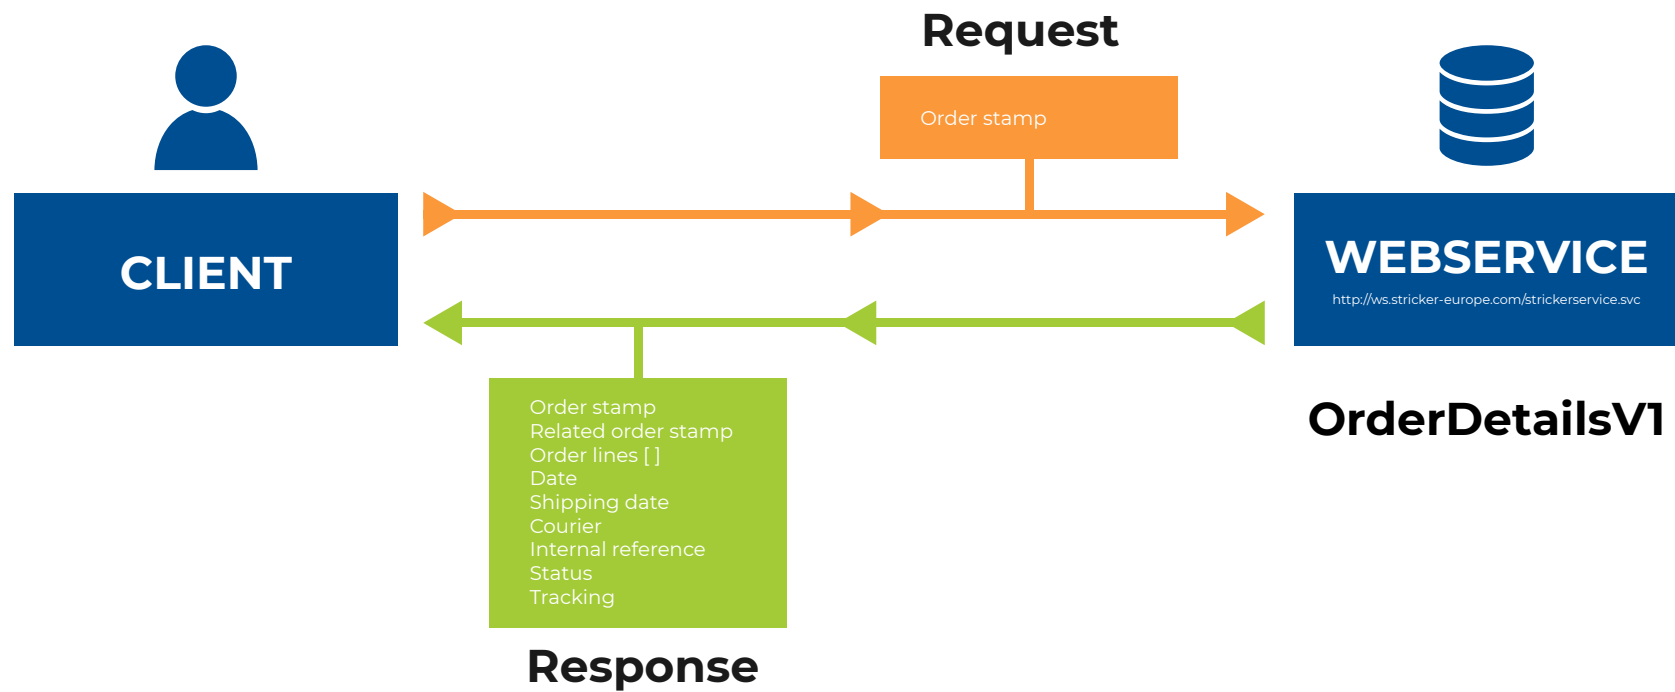

Always keep your **Order stamp** & **orderlinestamp** during all the process

10 ORDER LIST

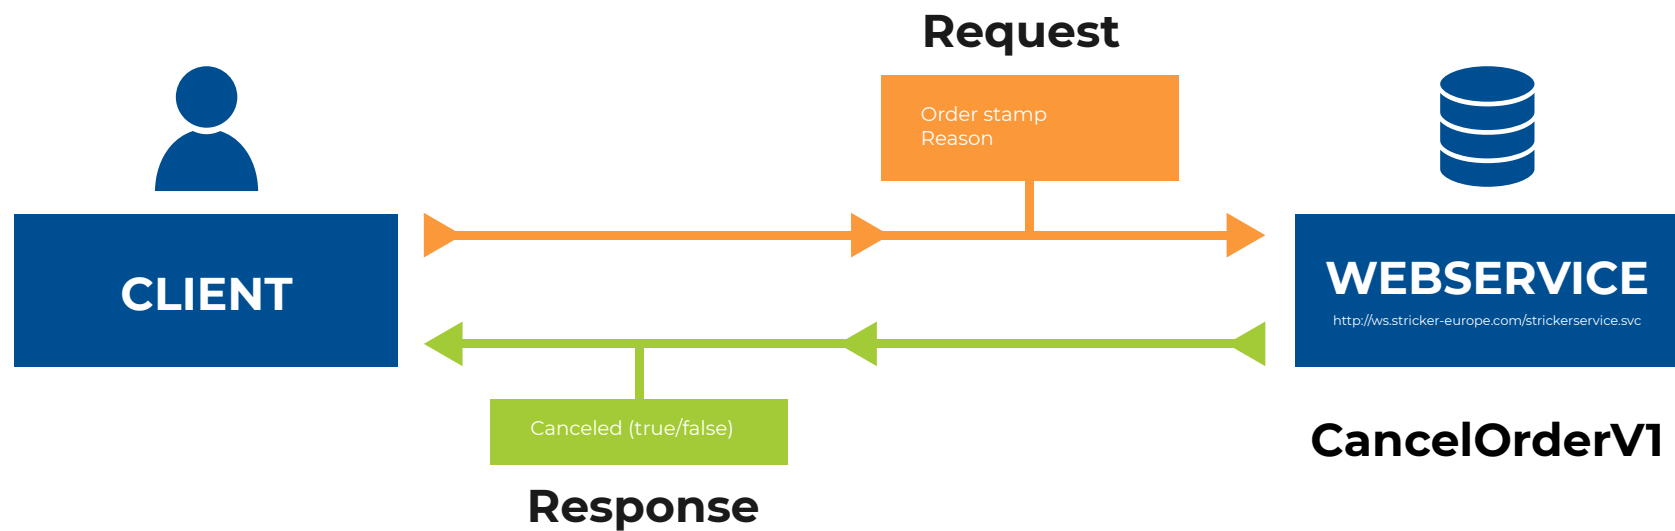

Always keep your **Order stamp** during all the process

11 ORDER DETAILS

Always keep your **Order stamp** during all the process

12 CANCEL ORDER
